**Zephyr creates domestic equity universes based on investment style / fund behavior using the Morningstar Mobius, Nelson's, PSN, and eVestment Alliance databases. Data rankings are prepared using the Zephyr Small Value Universe (Morningstar) – this universe uses the Morningstar Mutual Funds database for managers of which 239 managers were included in our peer group analysis for 3 yr, 220 managers for 5 yr, 179 managers for 10 yr and 151 managers for the period since 10/1/2006. Ratings were presented by Zephyr StyleADVISOR as the result of surveys created and conducted by Zephyr. SCM did not pay a fee to participate in these surveys.

Alpha –

Alpha is a measure of risk (beta)-adjusted return. Alpha measures the difference between a portfolio's actual returns and what it might be expected to deliver based on its level of risk. Theoretically, higher risk should equate to higher return. A positive alpha means the fund has beaten expectations. A negative alpha means that the fund has failed to match performance given its level of risk. If two managers have the same return, but one has a lower beta, that manager would have a higher alpha.

Beta –

Measures a portfolio's volatility relative to broad market movements. With the market given a beta of 1.00, a portfolio with a beta of 0.50 will participate only half as much in market movements, so that a lower number means less portfolio volatility than the market.

Downside Capture vs. Market –

Measures the percentage of market losses incurred by a portfolio when markets are down, compared to losses incurred by the market. The lower the number the better.

Maximum Drawdown –

Measures the maximum loss in any losing period during a portfolio's investment record. It is the percentage retrenchment from the portfolio's peak value to its valley value.

Risk-Adjusted Performance –

Risk-adjusted performance is the annualized rate of return of a blend consisting of the manager's

portfolio and cash. The blend is built in such a way that the resulting portfolio has the same standard deviation as the market benchmark. In other words, risk-adjusted performance "normalizes" a manager's standard deviation to equal that of the market benchmark.

Sharpe Ratio –

Measures a portfolio's return relative to its risk, with the return being the portfolio's return above the risk-free Treasury bill rate and the risk being the portfolio's standard deviation. The higher the Sharpe ratio the better the portfolio's risk-adjusted performance.

Sortino Ratio –

Similar to the Sharpe Ratio, but measures only a portfolio's downside risk. The higher the Sortino Ratio the better the portfolio's downside risk protection.

Standard Deviation –

Measures the degree of variation of a portfolio's returns around the portfolio's mean (average) return. A high standard deviation means that the portfolio is volatile. A low standard deviation means that the portfolio is generally consistent in producing similar returns.

Up Capture vs. Market –

The up-market capture ratio is the statistical measure of an investment manager's overall performance in up-markets. The up-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen.

Note: This data is presented as supplemental information to the fully compliant GIPS[®] presentation. Please see page 6 for additional disclosure information.

COMPOSITE NOTES

- The Symons[®] Small Cap Value Composite was created in October 2006 and consists of all fully discretionary portfolios that are managed in the Small Cap Value style, excluding wrap accounts. The investment objective for the Symons[®] Small Cap Value investment discipline is long-term capital appreciation achieved by investing primarily in a diversified portfolio of small capitalization companies that we believe are at attractive prices, and that appear to have strong potential for capital appreciation over the long-term. The strategy is typically allocated among a broad cross-section of market sectors and industries, as long as small cap stocks with attractive valuations are available for purchase in these sectors and industries. The minimum account size for initial inclusion in this composite is \$250,000.
- For comparison purposes the composite is measured primarily against the S&P SmallCap 600[®] index, and secondarily against the S&P SmallCap 600[®] Value index. Effective October 1, 2012, Symons[®] Capital Management, Inc. substituted the FTSE Russell 2000[®] Value index for the S&P 500[®] index as a secondary benchmark. Effective September 16, 2015, the FTSE Russell 2000[®] Value index replaced the FTSE Russell 2000[®] index as the primary benchmark. The FTSE Russell 2000[®] Value index primarily includes small capitalization value stocks that better represented our portfolio management and stock selection style than the S&P 500[®] index, which primarily includes only large-capitalization stocks and the FTSE Russell 2000[®] index, which primarily encompasses small capitalization stocks. Effective April 1, 2017, the S&P SmallCap 600[®] index replaces the FTSE Russell 2000[®] Value index as a primary benchmark, and the S&P SmallCap 600[®] Value index replaces the FTSE Russell 2000[®] index as a secondary benchmark, since FTSE Russell index returns are no longer available without paying substantial annual licensing fees. The S&P SmallCap 600[®] index measures the small-cap segment of the U.S. equity market using a capitalization-weighted index and is designed to ensure companies are liquid and financially viable. The S&P SmallCap 600[®] Value index consists of stocks from the S&P SmallCap 600[®] that exhibit value characteristics based on book value, earnings, and sales to price. Both benchmarks are unmanaged indices that primarily include small capitalization stocks that are representative of Symons[®] Capital Management, Inc.'s Small Cap Value portfolio management and stock selection style. The Symons[®] Small Cap Value Composite is managed with the objective of absolute total return. It is not managed against a specific benchmark and is not expected to be correlated with any particular market index. For informational purposes, the composite is compared to the S&P SmallCap 600[®] and S&P SmallCap 600[®] Value indices, although the composite portfolio may be composed of materially different investments and actual exposure to the benchmark sectors will vary. A direct investment in an index may involve different liquidity, risks and tax considerations. The Adviser may invest in securities outside of those represented in the indices. S&P SmallCap 600[®] returns are shown for the entire composite history.
- Results are based on fully discretionary accounts under management, including those accounts no longer managed by the firm. The U.S. Dollar is the currency used to express performance. Composite performance is presented net of foreign withholding taxes on dividends,

- interest income, and capital gains. Returns include the effect of foreign currency exchange rates. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross of fees returns are presented before management and custodial fees, but after all trading expenses. Net of fee performance was calculated using actual management fees. Past performance is not indicative of future results.
- The investment management fee is: 1.25% on the first \$1 million; 1.00% on the next \$4 million; 0.90% on the next \$5 million; 0.80% on the next \$15 million; 0.70% on the next \$25 million; and 0.60% above \$50 million. Actual investment advisory fees incurred by clients may vary.
 - The annual composite dispersion is an asset-weighted standard deviation calculated for the accounts in the composite the entire year. Three-year annualized ex-post standard deviation of the composite and benchmarks are not presented prior to 2012, because 36 monthly composite returns were not available until December 31, 2012.
 - Securities purchased by Symons[®] Capital Management, Inc. are listed on a major exchange with published values. Generally, month-end valuations as shown on custodian account statements are used to calculate portfolio assets and returns. Any cash flow equal to or greater than 5% of a portfolio's market value would cause the portfolio to be revalued and accounted for properly so as not to distort performance. Additional information regarding the policies for valuing portfolios, calculating performance and preparing compliant presentations is available upon request.
 - Symons[®] Capital Management, Inc. is an independent investment management firm, not affiliated with any parent organization, established in 1983 and registered with the U.S. Securities and Exchange Commission under the Investment Advisers Act of 1940. Prior to October 1, 2001, the firm was known as Dollins Symons[®] Management, Inc. The firm maintains a complete list and description of composites, which is available upon request.
 - Symons[®] Capital Management, Inc. claims compliance with the Global Investment Performance Standards (GIPS[®]) and has prepared and presented this report in compliance with the GIPS[®] standards. Symons[®] Capital Management, Inc. has been independently verified for the periods January 1, 1996 through March 31, 2017 by Ashland Partners & Company, LLP; and from April 1, 2017 through December 31, 2018 by ACA Performance Services LLC. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS[®] standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS[®] standards.
 - The Symons[®] Small Cap Value composite has been examined for the periods from October 1, 2006 through March 31, 2017 by Ashland Partners & Company, LLP; and from April 1, 2017 through December 31, 2018 by ACA Performance Services LLC. The verification and performance examination reports are available upon request.
